1. Isolation.

- a. At the time of inspection, the field must be separated from other fields by a fence row, natural boundaries, or by a strip at least five feet [1.52 meters] wide which is either mowed, uncropped, or planted to some other separable crop.
- b. When it is necessary to remove a strip to obtain proper isolation, a part of the strip to be removed must be cut into the field to be inspected.
- All buckwheat fields producing certified seed must be isolated by at least six hundred sixty feet [201.17 meters] from buckwheat fields of any other variety or fields of the same variety that do not meet the varietal purity requirements for certification.

2. Roguing.

- a. All roguing must be done before field inspection. Rogued plants must be removed from the field to be harvested.
- b. Patches of prohibited weeds must be either removed by cutting or must be controlled by other means so that no seed is produced.
